

Vellum

Secure document viewer

This is a demo document rendered to canvas,
watermarked, and locked against download.

Capability tokens

The host app signs a short-lived token.

It carries a presigned source URL,
watermark text, permissions, and an expiry.

Zero-knowledge proxy

The viewer holds no database and no storage credentials. It trusts a request only because the HMAC signature verifies.

Watermarking

Every page is stamped with the viewer's identity, baked into the pixels so it survives screenshots and DOM edits.

Slideshow mode

Use the toolbar to switch views, or the arrow keys to move between slides.
Right-click and Ctrl/Cmd+S are disabled.
